Search for diboson resonances with CMS and Pixel Barrel Detector Calibration and Upgrade

Dissertation

zur
Erlangung der naturwissenschaftlichen Doktorwürde
(Dr. sc. nat.)

vorgelegt der Mathematisch-naturwissenschaftlichen Fakultät
der
Universität Zürich

von
Jennifer Ngadiuba

Promotionskomitee

Prof. Dr. Benjamin Kilminster
Prof. Dr. Florencia Canelli
Prof. Dr. Laura Baudis
Prof. Dr. Ueli Straumann

Zürich 2016

Contents

1 Introduction **1**

2 The CMS Experiment at the LHC **2**
2.1 The Large Hadron Collider . . . 2
2.2 The CMS Detector . . . 2
2.2.1 The Silicon Tracker . . . 2
2.2.2 The Electromagnetic Calorimeter . . . 2
2.2.3 The Hadronic Calorimeter . . . 2
2.2.4 The Muon System . . . 2
2.2.5 The Trigger System . . . 2
2.3 The CMS detector simulation . . . 2

3 The Standard Model and beyond **3**
3.1 The Standard Model . . . 3
3.1.1 Particles and interactions . . . 3
3.1.2 Spontaneous symmetry breaking . . . 3
3.1.3 The Higgs mechanism . . . 3
3.1.4 The Higgs boson discovery at LHC . . . 3
3.2 The hierarchy problem and other SM limitations . . . 3
3.3 Theories of new physics . . . 3
3.3.1 Warped Extra dimensions . . . 3
3.3.2 Compositeness . . . 3
3.3.3 Heavy vector triplet . . . 3

I Search for diboson resonances with CMS **4**

4 Diboson resonances as signature for new physics **5**

5 Object and event reconstruction **6**
5.1 Tracks and vertices . . . 6
5.2 Electrons . . . 6
5.3 Muons . . . 6
5.4 Jets . . . 6
5.4.1 Identification of b jets . . . 6
5.5 Missing transverse energy . . . 6
5.6 W$\to \ell\nu$ reconstruction . . . 6

6 Event simulation **7**
6.1 Monte Carlo event generators . . . 7
6.2 Simulation of physics processes . . . 7
6.2.1 Simulation of signal processes . . . 7
6.2.2 Simulation of background processes . . . 7

7 Boosted H→b$\bar{\text{b}}$ and W/Z→q$\bar{\text{q}}^{(\prime)}$ identification with jet substructure 8
7.1 Jet substructure algorithms . . . 8
7.1.1 Jet pruning . . . 8
7.1.2 N-subjettiness . . . 8
7.2 W/Z-tagging validation in top enriched sample . . . 8
7.3 H-tagging algorithm . . . 8

8 Final event selection and categorization 9
8.1 Search for a WH resonance in the $\ell\nu$b$\bar{\text{b}}$ final state at $\sqrt{s} = 8$ TeV . . . 9
8.1.1 $t\bar{t}$ background rejection . . . 9
8.1.2 Final selection and control plots . . . 9
8.2 Search for WW/WZ resonances in the $\ell\nu$q$\bar{\text{q}}^{(\prime)}$ final state at $\sqrt{s} = 13$ TeV . . . 9
8.2.1 W/Z-jet mass categories . . . 9
8.2.2 Final selection and control plots . . . 9

9 Signal and background modeling 10
9.1 Signal modeling . . . 10
9.1.1 Parametrization of the resonance mass . . . 10
9.1.2 Signal efficiency . . . 10
9.2 Background modeling . . . 10
9.2.1 W+jets background estimate with alpha method . . . 10
9.2.2 $t\bar{t}$ control sample . . . 10
9.3 Systematic uncertainties . . . 10
9.3.1 Systematic uncertainties in the background estimation . . . 10
9.3.2 Systematic uncertainties in the signal prediction . . . 10

10 Results with 8 TeV data 11
10.1 Final m_{WH} distribution . . . 11
10.2 Studies on the excess . . . 11

11 Results with 13 TeV data 12
11.1 Final m_{WV} distribution . . . 12

12 Statistical and model interpretation 13
12.1 Testing new resonance hypothesis . . . 13
12.1.1 Profile likelihood procedure . . . 13
12.1.2 The CL_s method . . . 13
12.1.3 Treatment of uncertainties . . . 13
12.2 Limits on the 8 and 13 TeV cross sections . . . 13

13 Combination of searches for diboson resonances at $\sqrt{s} = 8$ and 13 TeV 14
13.1 Inputs to the combination . . . 14
13.1.1 8 TeV VV searches . . . 14
13.1.2 13 TeV VV searches . . . 14
13.1.3 8 TeV VH searches . . . 14
13.1.4 13 TeV VH searches . . . 14
13.2 Combination procedure . . . 14
13.3 Results . . . 14
13.3.1 Limits on W' . . . 14
13.3.2 Limits on Z' . . . 14

13.3.3 Limits on heavy vector triplet (W'+Z') . . . 14
13.3.4 Limits on Bulk Graviton . . . 14
13.3.5 Significance at 2 TeV . . . 14

14 Conclusions **15**

II Calibration and Upgrade of the CMS Pixel Barrel Detector **16**

15 The CMS Pixel Barrel Detector **17**
15.1 Design of the CMS Pixel Barrel Detector . . . 17
15.2 Detector modules . . . 17
15.2.1 Sensor . . . 17
15.2.2 Readout Chip . . . 17
15.2.3 Token Bit Manager . . . 17
15.3 Readout and control system . . . 17
15.3.1 Analog readout chain . . . 17
15.3.2 Front End Driver . . . 17
15.3.3 Supply Tube . . . 17
15.3.4 Communication and Control Unit . . . 17
15.3.5 Front End Controller . . . 17
15.4 Pixel Online Software . . . 17

16 Optimization and commissioning for LHC Run II **18**
16.1 Radiation damage after LHC Run I . . . 18
16.2 Optimization for LHC Run II . . . 18
16.2.1 Overview of pixel calibrations . . . 18
16.2.2 Temperature dependence . . . 18
16.3 Commissioning for LHC Run II . . . 18
16.3.1 Installation into CMS . . . 18
16.3.2 Check out of optical connections . . . 18
16.3.3 Adjustment of readout chain settings . . . 18
16.3.4 Optimisation of signal performance . . . 18

17 Phase I Upgrade of the CMS Pixel Barrel Detector **19**
17.1 Motivations . . . 19
17.2 Summary of changes . . . 19
17.3 The digital readout chain . . . 19
17.4 The Phase I supply tubes . . . 19
17.5 The test stand . . . 19
17.6 Supply tubes assembly and commissioning . . . 19
17.7 Detector commissioning . . . 19

18 Conclusions **20**

III Summary **21**

Chapter 1

Introduction

Chapter 2

The CMS Experiment at the LHC

2.1 The Large Hadron Collider

2.2 The CMS Detector

2.2.1 The Silicon Tracker

2.2.2 The Electromagnetic Calorimeter

2.2.3 The Hadronic Calorimeter

2.2.4 The Muon System

2.2.5 The Trigger System

2.3 The CMS detector simulation

Chapter 3

The Standard Model and beyond

3.1 The Standard Model

3.1.1 Particles and interactions

3.1.2 Spontaneous symmetry breaking

3.1.3 The Higgs mechanism

3.1.4 The Higgs boson discovery at LHC

3.2 The hierarchy problem and other SM limitations

3.3 Theories of new physics

3.3.1 Warped Extra dimensions

3.3.2 Compositeness

3.3.3 Heavy vector triplet

Part I

Search for diboson resonances with CMS

Chapter 4

Diboson resonances as signature for new physics

Chapter 5

Object and event reconstruction

5.1 Tracks and vertices

5.2 Electrons

5.3 Muons

5.4 Jets

5.4.1 Identification of b jets

5.5 Missing transverse energy

5.6 W$\rightarrow \ell\nu$ reconstruction

Chapter 6

Event simulation

6.1 Monte Carlo event generators

6.2 Simulation of physics processes

6.2.1 Simulation of signal processes

6.2.2 Simulation of background processes

Chapter 7

Boosted H→$b\bar{b}$ and W/Z→$q\bar{q}^{(\prime)}$ identification with jet substructure

---

7.1 Jet substructure algorithms

7.1.1 Jet pruning

7.1.2 N-subjettiness

7.2 W/Z-tagging validation in top enriched sample

7.3 H-tagging algorithm

Chapter 8

Final event selection and categorization

8.1 Search for a WH resonance in the $\ell\nu b\bar{b}$ final state at $\sqrt{s}$ = 8 TeV

8.1.1 $t\bar{t}$ background rejection

8.1.2 Final selection and control plots

8.2 Search for WW/WZ resonances in the $\ell\nu q\bar{q}^{(\prime)}$ final state at $\sqrt{s}$ = 13 TeV

8.2.1 W/Z-jet mass categories

8.2.2 Final selection and control plots

Chapter 9

Signal and background modeling

9.1 Signal modeling

9.1.1 Parametrization of the resonance mass

9.1.2 Signal efficiency

9.2 Background modeling

9.2.1 W+jets background estimate with alpha method

9.2.2 $t\bar{t}$ control sample

9.3 Systematic uncertainties

9.3.1 Systematic uncertainties in the background estimation

9.3.2 Systematic uncertainties in the signal prediction

Chapter 10

Results with 8 TeV data

10.1 Final m_{WH} distribution

10.2 Studies on the excess

Chapter 11

Results with 13 TeV data

11.1 Final m_{WV} distribution

Chapter 12

Statistical and model interpretation

12.1 Testing new resonance hypothesis

12.1.1 Profile likelihood procedure

12.1.2 The CL_s method

12.1.3 Treatment of uncertainties

12.2 Limits on the 8 and 13 TeV cross sections

Chapter 13

Combination of searches for diboson resonances at $\sqrt{s} = 8$ and 13 TeV

13.1 Inputs to the combination

13.1.1 8 TeV VV searches

13.1.2 13 TeV VV searches

13.1.3 8 TeV VH searches

13.1.4 13 TeV VH searches

13.2 Combination procedure

13.3 Results

13.3.1 Limits on W'

13.3.2 Limits on Z'

13.3.3 Limits on heavy vector triplet (W'+Z')

13.3.4 Limits on Bulk Graviton

13.3.5 Significance at 2 TeV

Chapter 14

Conclusions

Part II

Calibration and Upgrade of the CMS Pixel Barrel Detector

Chapter 15

The CMS Pixel Barrel Detector

15.1 Design of the CMS Pixel Barrel Detector

15.2 Detector modules

15.2.1 Sensor

15.2.2 Readout Chip

15.2.3 Token Bit Manager

15.3 Readout and control system

15.3.1 Analog readout chain

15.3.2 Front End Driver

15.3.3 Supply Tube

15.3.4 Communication and Control Unit

15.3.5 Front End Controller

15.4 Pixel Online Software

Chapter 16

Optimization and commissioning for LHC Run II

16.1 Radiation damage after LHC Run I

16.2 Optimization for LHC Run II

16.2.1 Overview of pixel calibrations

16.2.2 Temperature dependence

16.3 Commissioning for LHC Run II

16.3.1 Installation into CMS

16.3.2 Check out of optical connections

16.3.3 Adjustment of readout chain settings

16.3.4 Optimisation of signal performance

Chapter 17

Phase I Upgrade of the CMS Pixel Barrel Detector

17.1 Motivations

17.2 Summary of changes

17.3 The digital readout chain

17.4 The Phase I supply tubes

17.5 The test stand

17.6 Supply tubes assembly and commissioning

17.7 Detector commissioning

Chapter 18

Conclusions

Part III

Summary
